

Durable Preformed Thermoplastic Overlay for Stamped Asphalt or Concrete

TrafficPatternsLT™ is a preformed thermoplastic pavement marking material that provides a more durable and skid-resistant surface than typical epoxy coatings or paint. Application is simple with a propane heat torch or an infrared heater. It can be applied over newly-stamped asphalt or used as a refurbishment where previous coatings have worn away. This durable alternative eliminates the need to repaint again and again.

PERFORMANCE-BASED FEATURES AND BENEFITS

- Durable alternative to coating over existing or newly-stamped asphalt or concrete
- Material shall not be stamped with templates or grids; rather when heated, it will contour to the impressions already present in the substrate
- 90-mil thickness; 2' x 2' sheets
- High skid/slip resistant for safety. As material wears, new anti-skid elements are exposed.
- Enhanced durability provides optimum wear in adverse conditions
- Light to moderate ADT
- Apply with infrared heater or propane torch
- ADA compliant - Pedestrian and wheelchair friendly surface
- Eliminates the maintenance and safety concerns of loose pavers
- All preformed thermoplastic materials are made at Ennis-Flint's manufacturing facility which is ISO 9001:2008 certified for design, development and manufacturing of preformed thermoplastic. Quality, value and long-term performance are built into the marking. Anti-skid elements are added at time of manufacturing for optimized application at the jobsite.

TrafficPatternsLT™ is supplied in 2 ft. x 2 ft. sheets of non-reflective preformed thermoplastic material that is 90-mil thick. After proper surface preparation, the material is positioned over stamped asphalt or worn coating, then heated until molten to allow for proper bond. The TrafficPatternsLT™ material itself should not be stamped; rather - when heated, the material flows into the grooves of the previously stamped pattern.

TrafficScapes™

Surface Systems for Enhanced Safety

CROSSWALKS • MEDIANS • ISLANDS • ROUNDABOUTS • ENTRYWAYS • LOGOS

TrafficScapes™ is a portfolio of preformed thermoplastic pavement marking materials engineered for durability, safety, and aesthetics for the streetscape and traffic calming market designed to:

- Improve traffic safety especially at intersections and multi-use paths
- Enhance visibility for pedestrians, motorists, and cyclists
- Provide design elements that complement a Complete Streets community
- Channel pedestrians across busy commercial parking areas
- Promote and/or revitalize community image
- Attract new business development in livable communities
- Create low-cost median or island effect without the use of raised curbs

Each product offers its own unique application and performance approach to streetscape projects where shared roadway safety and aesthetic appeal need to work in conjunction.
